

# Documentation

## Insert Occurrences

When you need to document more than one body part, side, pain site, or education topic, you will enter each as a separate occurrence.

Each occurrence will be viewed separately in the medical record.

1. Click within a documented Occurrence.
2. Click the **Insert Occurrence** footer button. 
3. Result: a blank occurrence with a new Occurrence # appears.

<b>+ Pain - Occurrence #1</b>		Black arrow  = Keyed query. This means the response to this query stays connected to this occurrence. Sometimes two queries are keyed together (e.g., Location and a Modifier = Left Shoulder.)
→ Location Modifier	Left	
→ Pain Location	Shoulder	
<b>+ Pain - Occurrence #2</b>		
→ Location Modifier	Right	
→ Pain Location	Hip
