

# Care Plan Documentation

## EMR - Locating Care Plan Documentation

It is considered **BEST PRACTICE** to review care plan documentation before you start caring for your patient.

Care Plan documentation can be found in the **Care Activity and Notes panels**.

### Care Activity Panel:

- Care plan documentation will sort together because the interventions start with the word Care Plan without an asterisk. Only the VAP interventions will sort differently.
- Care Activity will only display the last 3 assessments documented, but any other documentation can be viewed by right clicking on an intervention name and clicking display.

### Notes Panel:

- All Healthcare team care plan documentation can be viewed from the “All Notes” panel.
- To sort care plan documentation together, click on the header of the “Type” column. 
- To see a cumulative view of all care plan documentation details, locate the most recent documentation entered and click on the intervention name.
  - A report will display with all healthcare team documentation viewing from earliest to latest.
- Clicking on the blue information icon  in any row will only display the details related to that documentation for that specific day and time.
