

Documentation

Allergies

1. Highlight the patient on the Status Board.
2. Click **Allergies**.
3. The Allergy screen opens. From here, confirm listed allergies, record new allergies, and edit allergy information.
4.  First, confirm the previously recorded allergy information with the patient. If correct, highlight the allergy and click the **Confirm** footer button.
 - Uncoded allergies cannot be confirmed.
5.  To enter new allergies, click **Enter New**.
 - a. At **Allergy/Adverse Reaction**: type a few letters of the allergy name. From the list that forms make a selection.
 - b. Select **Type** and **Severity** based on the current policy at your ministry for selecting Type and coding Severity.
 - c. At **Verified**: accept default of **Yes**.
 - d. At **Reaction**: type a description or click the down arrow for choices.
 - e. Click **Save**.  The allergy appears in green text under New Allergies.
 - f. Repeat the steps to enter other allergies. When done entering all the allergies, click **Save** again. 
 - g. Click **Done** to exit.
 - h. Result: Allergies will appear in the patient header next to the blue icon. 3 dots indicate that there are more allergies to view.
6. To Delete a filed allergy, highlight the allergy. Click **Delete**. Click **Done** to exit.
7. To Edit a filed allergy, highlight the allergy. Click **Edit** and make the changes and click **Save**. Click **Save** again. Then click **Done** to exit.

NKA

Unable
to Obtain
