

Documentation

Family Medical History

Process:

1. Click to highlight **Family Medical History**
2. Click the **Document** footer button, or double click the intervention name.
3. Read the instructions in the text bubble - "Document ONLY positive health history, and click **OK**. (**Important:** Do not click "Add to problem list".)
4. The **Setup Family History** window appears the first time this assessment is documented.
 - a. Insert the number of moms, dads, and siblings.
 - b. Click **OK**.
5. A table appears with family members listed at the top in separate columns.
 - a. If there are more than 8 family members, there will be more pages. Look at the top for the number of pages. 
 - b. **If there is no family history**, click the **No Hx** button, and then click **Save**. 
6. **To document a condition**, from the family member column, click the row with the condition name, e.g., Asthma.
 - a. A checkmark appears.
 - b. If known, click **Onset Age**.
 - c. Click the text bubble to add any comments.
7. **To add a condition not listed**, click the **Add Conditions** button.
8. At **Search**: type **family** and a few letters of the condition to narrow the search. (Ex: Type **Family asth** for Family Hx of asthma)
 - a. Make a selection.
 - b. Click **OK**. **Result:** A new row is created for that condition.
 - c. From the family member column, click on the condition row and enter the Onset Age.
 - d. Click **OK**.
9. **To delete a family member entered in error**, click the column header for the family member, and then click the **Delete This Relation** footer button.
10. **To remove a condition**, click the checkmark under the family member column and click the circled condition to remove the circle.
11. When everyone is documented, click **Save**.

12. **Family Medical History** appears in the EMR under the **History** panel.
13. On the next visit, if everything is the same, click the **Reviewed** box (top row).
